1 第1章 アップデイトの環境

1.1 第1節 OS、Drupal Commons

OS : Debian

Drupal Commons v6x-1.5 → v6x-1.6 へアップデート

2 第2節 アップデイトの手順

2.1 第3節 概要

既存サイトをメンテナンスモードにします。

データベースのバックアップ

ディレクトリのバックアップ

…../sites ディレクトリを再利用するすので、移動します。

新しい Drupal Commons のソースを解凍展開します。 その新しい sites ディレクトリと古い saites ディレクトリを入れ替えます。

Sites/defaults/setting.php のパーミッションを書き込み可能、 chmod 775 等に変更します、

sites/default/settpings.php を編集

```
$update_free_access = FALSE;. を $update_free_access = TRUE;. へ変更します。
```

アップデート終了後

sites/default/setppings.php を編集 TRUE からもとの FALSE に戻す

sites/default/setppings.php のパーミッションを 書き込みできないように たとえば chmod 755 などにします。

2.2 操作のスクリーンショット

実際の操作スクリーンショットです。 環境により、表示される画面が変更になります。

アップデートで始めに表示される画面です。

The screenshot shows the Drupal administration interface for a site named 'dc_dc1'. On the left, there is a navigation menu with the following items: 'Overview' (selected), 'Select updates', 'Run updates', and 'Review log'. The main content area displays the 'Drupal database update' utility. The text reads: 'Use this utility to update your database whenever a new release of Drupal or a module is installed. For more detailed information, see the [Installation and upgrading handbook](#). If you are unsure what these terms mean you should probably contact your hosting provider.' Below this, there are four numbered steps: 1. **Back up your database.** This process will change your database values and in case of emergency you may need to revert to a backup. 2. **Back up your code.** Hint: when backing up module code, do not leave that backup in the 'modules' or 'sites/*/modules' directories as this may confuse Drupal's auto-discovery mechanism. 3. Put your site into [maintenance mode](#). 4. Install your new files in the appropriate location, as described in the handbook. At the bottom, it says 'When you have performed the steps above, you may proceed.' and there is a 'Continue' button.

もし、`settings.php` の設定が変更になっていない場合、表示されます。

アップデートの準備ができましたので、アップデートボタンをクリックします。

Drupal Commons 6x-1.5 から 6x-1.6 へアップデートする際には、以下のような警告（ワーニング）が表示されますが、そのまま実行します。

The screenshot shows the T-OB Drupal update interface. On the left, a sidebar contains a navigation menu with four items: Overview, Select updates, Run updates, and Review log, each preceded by a green checkmark. The main content area is titled "Drupal database update". It features a red-bordered box containing two warning messages from the Drupal update process. Below this box, a paragraph explains that updates were attempted and provides instructions on how to proceed based on the presence of failures. A "Reminder" section follows, advising to set the `$update_free_access` value in the `settings.php` file back to `FALSE`. Two links, "Main page" and "Administration pages", are provided. At the bottom, a grey box lists the queries executed for the "color module" and "commons_admin module", both showing "Update #6001" and "Update #6000" respectively, with "No queries" listed below each.

T-OB

- ✓ Overview
- ✓ Select updates
- ✓ Run updates
- ✓ Review log

Drupal database update

- warning: include_once(/profiles/drupal_commons/modules/contrib/panels/plugins/export_ui/panels_layouts.inc) [function.include-once]: failed to open stream: No such file or directory in /var/www/html/d1/t-ob/commons/profiles/drupal_commons/modules/contrib/ctools/includes/plugins.inc on line 341.
- warning: include_once() [function.include]: Failed opening './profiles/drupal_commons/modules/contrib/panels/plugins/export_ui/panels_layouts.inc' for inclusion (include_path='./usr/share/php:/usr/share/pear') in /var/www/html/d1/t-ob/commons/profiles/drupal_commons/modules/contrib/ctools/includes/plugins.inc on line 341.

Updates were attempted. If you see no failures below, you may proceed happily to the [administration pages](#). Otherwise, you may need to update your database manually. All errors have been [logged](#).

Reminder: don't forget to set the `$update_free_access` value in your `settings.php` file back to `FALSE`.

- [Main page](#)
- [Administration pages](#)

The following queries were executed

color module
Update #6001

- *No queries*

commons_admin module
Update #6000

- *No queries*

3 第3節 参考資料

3.1 Drupal Commons 6.x-1.6 のアップデート手順

<http://network.acquia.com/downloads/drupal-commons/6.x-1.6-release-notes>

UPGRADING TO 1.6:

NOTE: THIS IS A SIGNIFICANT UPGRADE. You should NOT install it directly on live site without first testing it on a staging site.

1. Carefully review the NOTES above
2. Backup your code and database
3. Turn on maintenance mode (admin/settings/site-maintenance)
4. Replace your codebase (excluding the sites directory) with the contents of this archive.
 - It is important that you do not *merge* the new codebase, as a number of modules were remove or relocated!
5. Update your site via /update.php
 - Ignore any errors about missing Panels files
6. Make sure the Page manager module is disabled. Or, if you wish to continue using it, delete any pages using the path "/home", the Node template, and the User profile template, which may be leftover from a previous version of Commons.
7. Navigate to the admin theme page (admin/build/themes)
 - Ensure that Fusion Core and Commons Roots (both base themes) are enabled
 - Ensure that at least one Commons-supported theme is enabled, and choose your desired default theme (if not already set)
 - The original Acquia Commons theme is now named Commons Origins.
 - Note: *If you have built a new theme based on Acquia Commons, or made changes in the default Acquia Commons theme for your site, you are likely to need to merge your theme changes with the new "split" theme. This may require some time, so plan accordingly.*
8. View the status report (admin/reports/status) to see if there are any errors to tend to
9. Take the time to delete or disable any of the components listed [here](#)
 - - ***This is extremely important!***
 - Once done, navigate to all areas of your site, making sure there is no remaining strange or duplicate behavior of any kind

10. Navigate to the Features admin page (admin/build/features)
 - Determine which features are overridden
 - Click on the overridden link for each feature to review what the the overrides are for each component inside the given feature
 - If possible, revert as many components as possible, remembering that reverting a component will remove any customizations you've made to the given item
11. A bug revealed in Heartbeat led to the need for an additional permission to be created (access user activity). Users will need this permission in order to see the activity streams on group home pages. Commons comes with this permission given to anonymous and authenticated users by default, but you may have to either revert the Commons Core feature, or assigned the permissions manually, if upgrading.
12. Because of the introduction of Commons Profile (Feature) to handle the profile aspects of Commons, if you have deleted any profile fields that came with Commons initially, they will be restored after the upgrade. You must go in (admin/user/profile) and remove them once again.
13. If no issues have arisen, it is recommended that you make another backup of your codebase and database, then you may turn off maintenance mode.

3.2 Drupal Commons 6.x-1.6 で変更になったこと
